

CALAMITA

LAVABOS

# calamita solid

## Que es el solid surface?

El componente principal es un mineral (Trihidrato de Alúmina) que mezclado con un porcentaje de resinas hacen que consigamos un producto con las formas deseadas.

Su color natural es blanco neutro, con un tacto agradable, similar al mineral compacto, de gran dureza, resistencia al impacto y sin uniones visibles, siendo homogéneo y sólido en todo su espesor. También disponemos de una gama amplia de colores.

## What is the solid surface?

The main component is a mineral (alumina trihydrate) that mixed with a percentage of resins make us get a product with the desired forms.

Its natural color is neutral white, with a pleasant touch, similar to the compact mineral, of great hardness, resistance to impact and without visible joints, being homogeneous and solid throughout its thickness. We also have a wide range of colors.
